

1. Login Page

Purpose:

Authenticates analysts, administrators, or engineers into the ACIS platform.

Key Features:

- Secure credential-based login
- “Remember Me” option
- Single Sign-On (SSO) integration placeholder
- Quick navigation to workspace registration

2. Dashboard Page

Purpose:

Acts as the **security command center** — summarizing ACIS system health, threats, and key metrics.

Key Features:

- Displays event ingestion volume and errors
- Visualizes alert severity distribution
- Shows top open incidents with owner and status
- Key KPIs: Mean Time to Detect (MTTD) & Mean Time to Respond (MTTR)
- Real-time data charts powered by Recharts

3. Log Explorer (SPL-like) Page

Purpose:

Allows analysts to **search, filter, and analyze** raw event data across all sources.

Key Features:

- SPL-style query syntax (similar to Splunk)
- Mocked syntax highlighting and query editor
- Visual bar charts for time-based event distribution
- Download/export results to CSV
- Save common searches

4. Correlation Searches Page

Purpose:

Hosts **automated detection rules** that identify suspicious or correlated activities.

Key Features:

- Lists active/inactive correlation rules (e.g., "Impossible Travel", "Privilege Escalation")
- Shows risk scores and last run times
- Toggle on/off individual rules
- Add or edit custom correlation searches

5. Alerts & Incidents Page

Purpose:

Centralized **incident management and triage hub** for analysts.

Key Features:

- Displays deduplicated alerts and their severity
- Tracks incident ownership and current status
- Dropdown for quick actions: assign, create incident, or run a playbook
- Links alert sources (EDR, firewall, proxy, email)

6. Assets & Identities Page

Purpose:

Provides visibility into **infrastructure and user context** linked to security events.

Key Features:

- Asset inventory with owner, type, and tags
- Criticality classification
- Supports identity stitching for user-based correlation
- Useful for prioritizing investigations

7. Threat Intelligence Swarm Page

Purpose:

Implements the **collective intelligence** model — ACIS learns from every deployment.

Key Features:

- Enriches threat indicators (IPs, domains, hashes) using global intelligence
- Displays community signals (e.g., shared IOC detections across SMEs)
- Contributes anonymized intelligence to swarm learning
- Automates risk scoring adjustments

8. SOAR Playbooks Page

Purpose:

Orchestrates **automated incident responses** across multiple tools and services.

Key Features:

- Displays existing playbooks (e.g., isolate endpoint, reset account)
- Shows execution success rates and run times
- Allows manual triggering or configuration of automated runs
- Launch dialog to input parameters and execute immediately\

9. Red Team Simulator Page

Purpose:

Simulates **AI-driven attack scenarios** to continuously test the system's defenses.

Key Features:

- Launches realistic attack simulations (phishing, lateral movement, exfiltration)
- Tests control effectiveness via MITRE ATT&CK mappings
- Generates continuous “adversary emulation” feedback loops
- Helps validate incident response readiness

10. Endpoints & Network (Self-Healing) Page

Purpose:

Displays the health and recovery status of devices managed by the **Autonomous Cyber Immune System**.

Key Features:

- Monitors endpoint health (OK, degraded, quarantined)
- Shows rollback and isolation status
- Tracks software agent versions
- Core part of ACIS's **self-healing** feature

11. Compliance & Audit Page

Purpose:

Evaluates the organization's compliance against key cybersecurity frameworks.

Key Features:

- Monitors NIS2, GDPR, and ISO 27001 posture
- Displays % of satisfied controls
- Helps SMEs meet regulatory compliance effortlessly
- Generates metrics for audit reporting

12. Reports Page

Purpose:

Generates **exportable security reports** for executives and compliance teams.

Key Features:

- Downloadable PDFs, PPTX, and CSV reports
- Scheduled exports for weekly or monthly summaries
- Templates include: Executive Summary, Incident Board Pack, Detection Coverage

13. Settings Page

Purpose:

Manages workspace configuration, RBAC, and API keys.

Key Features:

- Role-based access control for analysts/admins
- API key generation and scope restriction
- Security hardening and key rotation guidance
- Future-ready for integration with external SIEM/SOAR systems
